

AMMONIUM SULPHATE

COMPOSITION

Ammonium sulphate is the filtered blowdown water from chemical air washers. Ammonium sulphate can best be compared to CAN (calcium ammonium nitrate) or sulfuric ammonia, commercially available as fertilizer, with the difference that the ammonium sulphate is liquid form and contains less nitrogen. The ammonium sulphate complies with the French standard NF U 42-001.

ANALYSE

35% dry matter // 35% organic matter
8% N (100% ammonium)
0,1% P_2O_5
0,3% K_2O
0,05% MgO
0,2% CaO
C/N ratio: 2,5
21% SO_3

USE

Agriculture, horticulture.

DELIVERY

In bulk by tanker or IBC (1000 l).

ADVANTAGES

- ✓ Ammonium sulphate can perfectly meet the nitrogen requirement and especially the sulphur requirements of crops (e.g. cabbage, onions, celery, leeks, grains, sugar beets, corn, ...).
 - ✓ Possibility to increase the N content by adding liquid nitrogen.
 - ✓ Due to filtration, the ammonium sulphate can be applied with a sprayer.
-
